SUMMARY

Senior Software Developer with 5+ years of professional software development experience designing, developing, and deploying enterprise-grade applications using Angular, .NET Core, C#, and TypeScript across insurance, financial services, and healthcare domains. Extensive expertise in building scalable APIs and services using SOA and event-driven architectures, with a strong focus on OOP and design patterns. Proficient in relational databases, especially PostgreSQL, with deep knowledge of data modeling and query optimization. Proven track record of contributing to architecture decisions around performance, reliability, and maintainability. Experienced in mentoring developers and collaborating in agile teams to deliver high-quality software solutions.

SKILLS

Core Capabilities: Senior Software Developer, Angular, ASP.NET Core, C#, TypeScript, JavaScript, HTML/CSS, .NET Core, OOP, design patterns, APIs, relational databases, PostgreSQL, SOA, event-driven, scalability, performance, reliability, mentoring, architecture, Java, Spring Boot, React, Microservices, RESTful Web Services, SQL, PL/SQL, Python, C++, Hibernate, JDBC, Servlets, JSP, Swagger/OpenAPI, JSON, JWT Authentication, Role-Based Access Control (RBAC), Spring Security, MySQL, Oracle Database, MongoDB, AWS (EC2, S3, ECS, Lambda, Elastic Beanstalk, API Gateway), Docker, Jenkins, CI/CD, JUnit 5, Mockito, Testcontainers, TDD, SonarQube, Git, GitHub, Bitbucket, Maven, Postman, Jira, Confluence, Apache Tomcat, Eclipse, Agile/Scrum, xUnit, Moq, Entity Framework Core, LINQ, OAuth, Identity Framework

WORK EXPERIENCE

Senior Software Developer

March 2025 – Present

State Compensation Insurance Fund (SCIF)

- Engineered scalable backend services using .NET Core and C# to support end-to-end claim lifecycle workflows, including claim validation, business rule processing, and real-time service integration within a distributed event-driven microservices architecture.
- Designed and implemented RESTful APIs with strict request/response modeling and robust error handling to ensure reliable client-server interactions, leveraging ASP.NET Core for high performance.
- Developed dynamic, responsive internal dashboards for claims adjusters using Angular, integrating seamlessly with backend .NET Core REST APIs for real-time claim status updates.
- Modeled data persistence using Entity Framework Core and PostgreSQL, mapping complex entities and relational database structures for claims and users, optimizing query performance with indexing.
- Applied OOP and design patterns such as repository pattern, dependency injection, and middleware to ensure maintainable, scalable, and reliable codebase.
- Mentored two junior developers on coding standards, code reviews, and best practices for Angular and .NET Core development.
- Contributed to architecture decisions around performance, reliability, and scalability by evaluating caching strategies, asynchronous processing, and load balancing.
- Secured protected resources by configuring JWT-based authentication and role-based access control (RBAC) across all endpoints using middleware in .NET Core.
- Orchestrated containerized microservices using Docker and AWS ECS, implementing event-driven workflows for automated document processing.

Software Developer

Jan 2023 – Jan 2024

Harland Medical Systems, Inc.

- Engineered and maintained scalable backend services using .NET Core and C#, facilitating high-volume processing of medical device coating data and seamless integration with client-facing Angular portals.
- Designed and documented robust RESTful APIs using Swagger/OpenAPI with ASP.NET Core, implementing global exception handling to ensure reliable, error-resistant communication.
- Implemented the persistence layer utilizing Entity Framework Core and Hibernate for relational database mapping of device batches, coating parameters, and quality control records in PostgreSQL.
- Optimized database performance by writing complex SQL queries and establishing indexing strategies in PostgreSQL, significantly reducing data retrieval latency.

- Developed comprehensive unit and integration tests using xUnit and Moq, ensuring core business logic reliability and preventing regression bugs.
- Enforced strict code quality standards by achieving high test coverage thresholds, integrating automated test executions directly into CI/CD pipeline.
- Deployed and managed containerized application environments utilizing Docker and AWS Elastic Beanstalk, ensuring automated environment provisioning and high availability.
- Leveraged cloud-native managed services such as AWS S3 for secure storage of compliance documents and logs.

Software Engineer

Sep 2021 – Jan 2023

Mastercard

- Developed and maintained scalable, cloud-native microservices using .NET Core and C#, providing RESTful endpoints that deliver mission-critical financial analytics.
- Architected robust RESTful service communication patterns to enhance system resilience and enable scalable processing of global financial transactions in an SOA environment.
- Managed complex data persistence and object-relational mapping using Entity Framework Core and PostgreSQL, ensuring high data integrity for sensitive financial records.
- Optimized data retrieval strategies by implementing advanced indexing, pagination, and refactoring LINQ queries, reducing report generation latency.
- Authored extensive unit test suites using xUnit and Moq, employing Test-Driven Development (TDD) approach to ensure 90%+ code coverage for core business logic.
- Performed rigorous integration testing using Testcontainers to validate service-to-service communication and database consistency.
- Streamlined software development lifecycle by managing version control via Bitbucket and automating multi-stage deployment pipelines in Jenkins.
- Collaborated in an Agile environment, maintaining detailed technical specifications and architectural diagrams in Confluence for seamless knowledge transfer.

Software Engineer

May 2020 – Sep 2021

Wipro

- Developed core backend services using C# and .NET Framework, implementing critical business logic for internal administrative tools within a strict 3-tier architecture.
- Designed robust RESTful endpoints using ASP.NET Web API, facilitating seamless and secure data exchange between frontend dashboards and backend processing units.
- Engineered efficient data access layers utilizing Entity Framework and ADO.NET to manage data persistence, ensuring high-performance database connectivity.
- Wrote and optimized complex SQL queries, stored procedures, and database triggers to support backend reporting and accelerate data retrieval for internal analytics.
- Authored comprehensive unit test suites using NUnit to validate core business logic, significantly reducing regression bugs.
- Mocked component dependencies and simulated edge cases using Moq to ensure resilience and accuracy of backend service layers prior to deployment.
- Implemented custom authentication and session management using OAuth and identity frameworks to secure proprietary company data.
- Managed source code versioning and collaborative workflows using Git, actively participating in debugging sessions to maintain high system availability.

PROJECTS

Career Companion Backend System | *Angular, .NET Core, C#, TypeScript, PostgreSQL, RESTful APIs, Docker, AWS EC2,*

- A full-stack web application built with Angular and .NET Core that automates and enhances resume tailoring based on specific job descriptions. The system processes unstructured resume documents, extracts and structures relevant data, evaluates alignment using similarity scoring, and rewrites content for improved relevance and ATS compatibility. Secure API integrations, containerized deployment with Docker, and cloud hosting on AWS ensure efficient, reliable, and real-time resume optimization.

EDUCATION

San Jose State University, CA, USA

Master of Science in Computer Software Engineering

Sathyabama Institute of Science and Technology, India

Bachelor of Engineering in Computer Science and Engineering
