SUMMARY

Senior Software Developer with 5+ years of experience building high-performance, scalable applications using Java, JavaScript, and PostgreSQL. Proficient in designing RESTful APIs, applying OOP and design patterns, and implementing SOA and event-driven architectures. Strong full-stack capabilities with JavaScript, HTML, and CSS for dynamic interfaces. Experienced in relational databases, microservices, and cloud deployment on AWS. Committed to delivering reliable, maintainable solutions through test-driven development and continuous integration.

SKILLS

Core Capabilities: JavaScript, HTML, CSS, PostgreSQL, Relational Databases, OOP, Design Patterns, SOA, Event-Driven Architecture, API Design, Java 8/11/17, Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Hibernate, JDBC, Microservices, RESTful APIs, Apache Kafka, AWS (EC2, S3, ECS, Lambda, Elastic Beanstalk, API Gateway), Docker, Jenkins, CI/CD, JUnit 5, Mockito, Testcontainers, TDD, SonarQube, Git, Maven, Agile/Scrum

WORK EXPERIENCE

Java Developer

March 2025 – Present

State Compensation Insurance Fund (SCIF)

- Engineered scalable backend microservices using Java 17 and Spring Boot, applying OOP principles and design patterns to support distributed systems workflows.
- Designed and implemented RESTful APIs with strict request/response modeling and robust error handling, ensuring reliable client-server interactions.
- Integrated Apache Kafka for event-driven asynchronous communication between claims processing microservices, enabling real-time event streams.
- Modeled data persistence using Spring Data JPA and PostgreSQL, mapping complex entities and optimizing relational database performance with indexing strategies.
- Developed a dynamic internal dashboard using JavaScript, HTML, and CSS (React) that seamlessly integrates with backend APIs for real-time status updates.
- Contributed to architecture decisions around performance, reliability, and maintainability of microservices deployed on AWS ECS.
- Secured endpoints using JWT-based authentication and role-based access control (RBAC).
- Wrote comprehensive unit and integration tests using JUnit 5 and Mockito, following Test-Driven Development (TDD) practices.
- Deployed containerized services using Docker and AWS ECS, ensuring high availability and automated scaling.

Java Developer

Jan 2023 – Jan 2024

Harland Medical Systems, Inc.

- Engineered and maintained backend microservices using Java and Spring Boot, applying design patterns for high-volume processing of medical data.
- Designed RESTful APIs with Swagger/OpenAPI documentation and global exception handling to ensure reliable communication.
- Implemented persistence layer using Spring Data JPA and Hibernate, mapping entity relationships for manufacturing records in PostgreSQL.
- Optimized database performance by writing complex SQL queries and establishing indexing strategies, reducing data retrieval latency.
- Developed unit and integration tests using JUnit and Mockito, achieving high code coverage and integrating tests into CI/CD pipelines.
- Deployed containerized applications using Docker and AWS Elastic Beanstalk, ensuring automated environment provisioning and load balancing.
- Leveraged AWS S3 for secure storage of compliance documents and logs.

Software Engineer

Sep 2021 – Jan 2023

Mastercard

- Engineered cloud-native Java 11 microservices using Spring Boot and Spring MVC, delivering high-volume transaction processing in financial services.

- Architected RESTful APIs for distributed systems, enhancing system resilience and scalability.
- Managed data persistence using Spring Data JPA and Hibernate, ensuring data integrity for financial records in relational databases.
- Optimized data retrieval with advanced indexing, pagination, and JPQL query refactoring.
- Authored extensive unit tests using JUnit 5 and Mockito with TDD approach, achieving 90%+ code coverage.
- Performed integration testing with MockMvc and Testcontainers to validate service communication.
- Managed version control with Bitbucket and automated multi-stage deployment pipelines in Jenkins.
- Applied OOP and design patterns to optimize backend application performance and multithreading.

Software Engineer

May 2020 – Sep 2021

Wipro

- Developed enterprise applications using Java 8 and Spring MVC, leveraging OOP and design patterns for multithreaded execution.
- Designed RESTful endpoints for secure data exchange between frontend dashboards and backend systems.
- Engineered efficient data access layers using JDBC and optimized SQL queries, stored procedures, and triggers for PostgreSQL.
- Authored comprehensive unit tests using JUnit and Mockito to validate core business logic and reduce regression bugs.
- Implemented custom authentication using Servlets and Filters.
- Managed source code with Git and participated in debugging sessions to maintain system availability.

PROJECTS

Career Companion Backend System | *Spring Boot, RESTful APIs, Java, JUnit, Mockito, Postman, Docker, AWS EC2, API C*

- Backend system to automate resume tailoring based on job descriptions using Spring Boot, REST APIs, and AWS. Designed scalable microservice with event-driven processing and data extraction.

EDUCATION

San Jose State University

Master of Science in Computer Software Engineering

Sathyabama Institute of Science and Technology

Bachelor of Engineering in Computer Science and Engineering
